

Course Descriptions International Computer Science Winter Semester 2023/24

12 September 2023

German A1/ Parts 3 and 4	
English in Technical Contexts B2	
Intercultural Training for Germany and Bavaria	8
Basics of International Sales and Business Development	10
Bavarian Culture	
Business Storytelling	13
Cross-Cultural Team Building	
Databases	18
Informatics I	20
Innovation Management for Artificial Intelligence	22
Quantum Computing	
Mobile and Wireless Networks	
Advanced Automation	28

German A1/ Parts 3 and 4

Course title	German A1/ Parts 3 and 4
ECTS	4
Course type	Course with exercises
sws	4
Semester	Winter and Summer
Workload in hours	60 hrs
Lecturer	Dr. Virginia Wallner
Course objectives	 Can understand and use familiar expressions and very basic phrases aimed at meeting concrete everyday needs Can introduce themselves and others and ask other people questions about their person Can communicate in a simple way if the other person speaks slowly and clearly and is willing to help http://www.europaeischer-referenzrahmen.de
Course contents	 Grammar Prepositions Possessives Dative verbs The imperative-Simple past 'war/ hatte' The perfect form Word formation Subjunctive II Topics Apartments and houses Parts of the body Describing people and their character Household activities Weather Holidays and celebrations

Recommended literature	Menschen. Deutsch als Fremdsprache. Kursbuch A1.2 Hueber. Kapitel 13-24 ISBN 978-3-19-561901-1 Menschen. Deutsch als Fremdsprache. Arbeitsbuch A1.2 mit Audio-CD. Hueber. Kapitel 13-24 ISBN 978-3-19-511901-6
	<u> </u>
Teaching methods	 Partner and group work Explanation of topics by the lecturer Presentations and discussions Feedback from the lecturer Listening exercises
Assessment method	Written examination, 90 min.
Language of instruction	German
Prerequisites	Successful completion of Level A1/Parts 1 and 2 (88121)

Course descriptions for German language courses at higher levels: https://th-deg.de/en/students/language-electives#german

English in Technical Contexts B2

Course title	English in Technical Contexts B2
ECTS	2
Course type	Language training course
sws	2
Semester	Winter and summer
Course level	 Can understand the main ideas of complex text on both concrete and abstract topics, including technical discussions in his/her field of specialization Can interact with a degree of fluency and spontaneity that makes regular interaction with native speakers quite possible without strain for either party Can produce clear, detailed text on a wide range of subjects and explain a viewpoint on a topical issue giving the advantages and disadvantages of various options
Lecturer	Neal O'Donoghue, MA
Course objectives	This course aims to deepen students' encounter with the English language in a technical context by giving practical training in specialized vocabulary, grammar and language usage. The four cardinal language skills – listening, speaking, reading, and writing – will play an integral role in this training. The course is designed to be relevant and interesting for engineering students and will be adapted to their learning needs and study areas. By the end of the course, participants should have a more comprehensive understanding of, and enhanced fluency in, the English language in an engineering context.

Course contents	 Obligatory topics (60 %): Numbers and mathematical operations Shapes and dimensions August 2017 Basic physics and the scientific worldview Materials and their properties Case study on an area related to technology /physics/engineering Grammar/ communication skills
	Variable content (40 %): Variable content will be determined on the basis of a student survey conducted in the first session. Current world events (including news events and popular culture) and recent technological innovations may be used as a basis for discussions.
Teaching methods	Teaching methods focus on improving the four cardinal language skills and include group discussions and group projects; individual work; mini-presentations; role-plays; close reading and listening activities; dictation; grammar games; and various follow-up viewing and writing activities. Work not completed in class should be done at home. Self-study assignments will be set on a weekly basis.
Assessment method	Written exam (60 min) No dictionaries are allowed. Exam structure: • Part 1: Listening comprehension(s) • Part 2: Reading comprehension(s) • Part 3: Vocabulary and technical content • Part 4: Grammar (maximum 10% of total exam points, excluding writing exercise) • Part 5: Writing composition (150-200 words) The exam will be based on topics covered during the semester.

Language of instruction	English
Prerequisites	B1 / Abitur (A-levels/ school leaving certificate giving right of entry to higher education) / 7-9 years of English

Intercultural Training for Germany and Bavaria

Course title	Intercultural Training for Germany and Bavaria
ECTS	1
Course type	Elective
sws	1
Semester	Winter and summer
Workload in hours	30 hours
Name of Instructor	Lisa Werner
Course objectives	Participants get an understanding of the different theories of "culture" and learn about stereotypes and traditions in Bavaria. Furthermore, the participants get information on Germany and Bavaria as well as the Deggendorf Institute of Technology.
Course contents	 I. Culture (theroies) II. Customs and Rituals in Germany/Bavaria III. Information on Germany and Bavaria and the DIT IV. Quiz and Presentation V. Culture Shock
Recommended literature	Bolten J. und Ehrhardt C., Interkulturelle Kommunikation, Verlag Wissenschaft & Praxis 2003; Bolten J, Einführung in die interkulturelle Wirtschaftskom- munikation, Vandenhoeck & Ruprecht 2007
Teaching methods	The course is organized according to four pillars: 1. Culture 2. Customs and Rituals 3. Information on Germany/Bavaria

4	\sim	LL	
4.	CJU	ıture.	Shock

Whereas hard facts are taught in a classical lecture style, students will do lots of role-plays, critical incidents, short movies and do a quiz.

Assessment method	Paper
Language of instruction	English/German
Prerequisites	None

Basics of International Sales and Business Development

Course title	Basics of International Sales and Business Development
Course ID	268
ECTS	2
Course type	Lecture with group work and presentations
sws	2
Semester	Winter and summer
Lecturer	Ibrahim Waked
Course objectives	General knowledge of international sales and strategic business development mechanisms. As well as profound analysis of practical case studies.
Course contents	 Basics of sales and business development Analysis of market potential including cultural & political aspects, correlation between microeconomic and demographic aspects, (PESTELO analysis) Relevancy of world bank reports on general economic performance and their implementation in company BD strategy Market entry and risk management
Recommended literature	Strategic Management by Richard Lynch von Pearson Longman Business Development Management By Lutz Becker, Walter Gora, Tino Michalski
Teaching methods	Lecture with integrated project development examples
Assessment method	Presentation and seminar paper
Language of instruction	English

Bavarian Culture

Course title	Bavarian Culture
Course ID	229
sws	2
Semester	Winter and summer
ECTS	2
Course type	Elective
Language of instruction	English
Name of lecturer	Manuela Krawagna-Nöbauer
Course objectives	Participants get a deeper understanding of the traditional and contemporary Bavarian culture by integrating knowledge about customs, language, and history with culturally routed events.
Course contents	 Hard facts History Demographics Geography Customs and rituals Traditional Contemporary Language Events
Teaching methods	The course is organized according to four pillars: 1. Hard Facts 2. Customs and Rituals 3. Language 4. Events Whereas hard facts are taught in a classical lecture style, students should experience aspects of the culture in a lively manner through knowledge dissemination of cultural experts, off-campus seminars at events of traditional cultural

	origin, as well as learning and engaging in cultural rituals themselves. The aim is to deepen and complement the contents taught in the Orientation Week.
Recommended literature	Jonas, B., Gebrauchsanweisung für Bayern, Piper Verlag, 2007
Assessment methods	Seminar paper
Prerequisites	Participants should have attended the introductory Intercultural Training during the Orientation Week.

Business Storytelling

Course title	Business Storytelling
Course ID	296
ECTS	2
Course type	Elective
sws	2
Semester	Winter and summer
Workload in hours	Total: 60 / In-class: 30 / Self-study: 30
Lecturers	Raphael Fiche
Course objectives	 At the end of this course, students will be able to: Recognize key elements that go into persuasive storytelling Identify types of stories and their purposes Create compelling stories to achieve business goals Apply acquired knowledge to develop a compelling story to persuade others to think or act in a different way.
Course contents	 Introduction to Business Storytelling Power of Business Stories: when and why to tell them Types of Business Stories and Their Purposes Structuring Your Story to Engage the Audience Storytelling techniques Enhance Your Storytelling Skills
Recommended literature	Janis Forman (2013), Storytelling in Business: The Authentic and Fluent Organization Seth Godin(2005), All Marketers Are Liars

Teaching methods	LecturesGroup workCase studiesPresentationExercises
Assessment method	Class workshops / presentation / case studies / seminar paper
Language of instruction	English
Prerequisites	None

Cross-Cultural Team Building

Course title	Cross-Cultural Team Building Workshop
Lecturer	Prof. Dr. Johann Nagengast
Course type	Elective
sws	2
Semester	Winter and summer
ECTS	2
Assessment method	Seminar paper
Course language	English
Course objectives	Globalisation demands that managers possess the basic skills required to work together in international teams. Many companies actively encourage the development of these skills through teambuilding or team development programs. Especially for change management, team development plays an increasingly important role. Here the critical goal is to optimise how the group members work together as a team. Key factors affecting a team's success include organisation, structures, processes, culture and relationships. International Team Building is conducted at the beginning of the semester as a three day off-campus seminar. The hands-on, outdoor training gives the students intensive exposure to the multifaceted nature of group dynamics. By working together to solve complex problems and through structured feedback sessions, the participants become sensitised to the rolls they assume in group interactions, to the limitations imposed by the German and their own cultures, and to the conditions required for effective team work.

The course supports the integration of foreign students into campus and social life and helps build lasting working relationships among all participants.

The skills of giving and receiving of feedback are learned in the protective atmosphere of small groups through intensive exchanges between instructors and participants. This leads to improved observation and communication skills.

Moreover, the group members continually switch roles. This promotes a deeper understanding of social interaction, helps members to reflect on their contribution to the group process, encourages members to experiment with new behavioural concepts, and improves the group's capacity to co-operate and perform. Final feedback rounds offer the possibility to align the members' self-images with the perception others have of them, to reduce "blind spots", to increase self-confidence and their ability to reflect.

The capacity to give appropriate feedback in various situations, to monitor one's self image as well as the consequences of one's own behaviour form the basis for a successful career in management.

Course contents

Group dynamics, processes and structures in groups; Roles in groups (roles in tasks and supporting roles); Group leadership; Effect of one's actions in groups; The "give and take" of feedback; Self-image and how others see you; Communication levels (content versus relationship); Conditions for successful co-operation; Cultural influences on teamwork.

Note: The main emphasis of this course is not the conveyance of theoretical knowledge, but rather learning directly from experience. The theories on which the intervention and evaluation sessions are based are taught in the course "Human Resources Management".

Teaching methods

This course is organised as an interactive experience and activity-based training program. With the help of complex tasks, timed interaction activities combined with elements of surprise, classical outdoor training exercises, moderated feedback and reflection sessions, participants are taught the necessary conditions for effective teamwork.

The teaching methods are based on the principles of selforganised learning. The instructors define their roles in terms of Schein's model of process consulting.

They intervene by questioning the participants in a manner designed not only to examine their perspectives, but to introduce new perspectives and stimulate the group's creative process.

The responsibility for these process remains with the participants.

In the context of the learning environment, the students enjoy the opportunity to increase their observation, communication, co-operation, self-reflection, teamwork and management skills as well as their self-confidence.

In addition, the course offers the students the chance to network and develop sustainable work relationships at the start of their studies.

Baron, R. S.: Group Process, Group Decision, Group Action, 2nd. Ed., Buckingham, 2003;

Suggested Literature

Buchanan, D., Huczynski, A.: Organizational Behavior, 5th Ed., Harlow, 2004;

Notes

The weekend seminar is characterised by team teaching in a mountain hostel. The team consists of Prof. Dr. Nagengast and trained tutors selected from participants in the course "Train the Trainer". The tutors make it possible to conduct the training in small "protected" groups (around 8) and to give qualified feedback.

Databases

Course title	Databases
ECTS	5
sws	4
Course type	Undergraduate
Semester	Winter and summer
Workload in hours	In-class: 60 hrs. / Self-study: 90 hrs / Total: 150 hrs
Lecturer	Prof. Dr. Wolfgang Dorner / Prof. DrIng. Udo Garmann
Course objectives	 After this module students should be able to describe the database design process, know the elements of the Entity-Relationship-Model, can build an Entity Relationship Model for a specific case, can normalize a database design, be able to manage a database through a database management system, be able to query a database using SQL, know the core components and functionalities of a database management system.
Recommended literature	Conolly, Thomas M.; Begg, Carolyn E.: Database Solutions - A step-by-step guide to building databases. 2nd Edition. Harlow, Essex: Pearson Education Limited, 2004 Conolly, Thomas M.; Begg, Carolyn E.: Database systems - A practical approach to design, implementation, and management. 4th edition. Addison-Wesley, an imprint of Pearson Education, 2005
Teaching methods	Classes with exercises and practical training Course and document management through E-Learning System iLearn

Assessment method	Written examination, 90 min.
Language of Instruction	English
Prerequisites	Basics in Computer Science

Informatics I

Course title	Informatics I - Intro to Unix and Python
ECTS	5
sws	4
Semester	Winter
Workload in hours	Total: 150 In-class: 60 / Self-study: 45 / virtual learning: 45
Lecturer	Prof. Dr. Gökçe Aydos

After successful accomplishment, the students can:

Professional competences

- summarize the challenges of biomedical text analysis
- list various scientific text resources and differentiate them
- outline the motivation behind ontologies for knowledge representation

Methodological competences

Course objectives

- implement shell scripts for automating information retrieval, text processing, and semantics processing
- breakdown given shell scripts into various components, tweak it for further purposes, and localize errors
- apply XPath expressions to extract data from XML files
- evaluate a shell script regarding performance considerations and suggest improvements
- apply regular expressions on text to extract relevant information
- find correlations between concepts (e.g., does caffeine lead to malignant hyperthermia?)
- implement Python programs which can solve simple text processing and automation problems

	Social competences
	 give constructive feedback to peers in context of peer-
	assessed exercise
Course contents	 data and text processing using the shell biomedical text resources semantics data retrieval data extraction task repetition XML processing text retrieval text processing pattern matching regular expressions tokens & entities & relations semantics processing classes entity linking performance considerations programming with Python control structures data structures objects & algorithms
Recommended literature	 Couto, Data and Text Processing for Health and Life Sciences Joyner, Introduction to Computing, 2016, ISBN: 1-260- 08227-X
Teaching methods	Seminar-like classes, interactive exercises during lecture
Assessment method	Written examination, 90 min.
Language of instruction	English
Prerequisites	Introduction to Informatics

Innovation Management for Artificial Intelligence

Course title	Innovation Management for Artificial Intelligence
ECTS	3
Course type	Lecture and seminar
sws	2
Semester	Winter semester
Workload in hours	90 hours
Lecturer	Prof. Dr. Patrick Glauner
Course objectives	In recent years, plenty of companies have started to invest in AI in order to remain competitive. However, some 80% of AI project fail in reality. There is clearly an acute need in industry for experts that get the big picture of what needs to be done so that AI adds value to companies. This course has been offered since 2020 and was at that time the first one world-wide to addresses that need. Students will learn a number of challenges, both technical and managerial, that companies typically face when becoming AI-driven companies. They will also learn respective best practices along the entire data journey and how these lead to deployed applications that create real business value.
Course contents	 Introduction: how AI is changing our society, selected examples of successful and unsuccessful AI projects and transformations History and promises of AI: Dartmouth conference, AI from 1955 to 2011, AI winters Deep learning era: breakthroughs, DeepMind, promises and hypes, no free lunch theorem, AI innovation in China, technological singularity Contemporary problems: assurance, alignment, regulation, explainable AI, ethics, patents AI transformation of companies: opportunities, challenges, best practices Case studies on how to turn companies into AI-driven companies

Teaching methods	Lecture and seminar
Assessment method	Seminar presentation
Language of instruction	English
Prerequisite	Foundations of AI

Quantum Computing

Course title	Quantum Computing
ECTS	5
Course type	Lecture and seminar
sws	4
Semester	Winter
Workload in hours	150 hours
Lecturer	Prof. Dr. Patrick Glauner, Prof. Dr. Horst Kunhardt
Course objectives	This class provides students with an introduction to Quantum Computing (QC), which looks promising to solve certain computational problems substantially faster than classical computers. QC began in the early 1980s and in recent years, investment into QC research has increased in both the public and private sectors. Students will acquire knowledge in QC and its applications in various domains such as machine learning and cryptography. They will also be able to elaborate it further in the future, for example in projects or further studies. Overall, QC is a cutting-edge field, with many high-pay opportunities for graduates.
Course contents	 Introduction: history, comparison to traditional computing, applications, business potentials Foundations: complex numbers, complex vector spaces Systems: deterministic systems, probabilistic systems, quantum systems, assembling systems Quantum theory: states, superposition, observables, measuring, dynamics, assembling quantum systems, entanglement Architecture: bits and qubits, classical gates, reversible gates, quantum gates, no-cloning theorem, mixed states Selected algorithms: Deutsch's, Deutsch-Jozsa, Simon's, Grover's, Shor's Theoretical computer science: limits of quantum computing, complexity classes

	 Quantum computers and programming: goals and challenges, decoherence, physical realizations, quantum annealing, adiabatic quantum computing Applications: quantum machine learning, quantum cryptography, quantum information theory
Recommended literature	 S. Aaronson, "Quantum Computing since Democritus", Cambridge University Press, 2013. P. Glauner and P. Plugmann (Eds.), "Innovative Technologies for Market Leadership: Investing in the Future", Springer, 2020. N. S. Yanofsky and M. A. Manucci, "Quantum Computing for Computer Scientists", Cambridge University Press, 2008.
Teaching methods	Lecture and seminar
Assessment method	Seminar presentation
Language of instruction	English
Prerequisite	Linear algebra and complex numbers

Mobile and Wireless Networks

Course title	Mobile and Wireless Networks
ECTS	5
Course type	Lectures with exercise sessions, where students demonstrate how they solve problems related to class topics.
sws	4
Semester	Winter
Workload in hours	Total: 150 / In-class: 60 / Self-study: 90
Lecturer	Prof. Dr. Andreas Kassler
Course objectives	Upon completion of the course, students should be able to: - explain the principles and limitations of wireless communication, - explain important technical aspects of current wireless communication systems, - compare and contrast different wireless communication systems based on an understanding of shared challenges (such as mobility management), - explain the principles of medium access control and why they have been designed in a certain way, - summarise key functions and principles behind different architectures for mobile and wireless communication systems, - critically evaluate different properties of a mobile communication system, taking into account design considerations, capacity, and limitations in relation to the technology in question.
Course contents	The course treats the principles of mobile and wireless, including the function and operation of modern mobile and wireless communication systems and networks related to architecture, protocol, and algorithms. Current wireless

	systems, such as cellular systems and mobile Internet, including the WLAN standard IEEE 802.11, are used as examples to explain these principles.
	The course includes components and exercises that treat these topics in-depth.
	The course covers the following: - Radio signals - Coding, modulation, and multiplexing - Medium access - The basic principles of cellular systems and networks - WLAN (e.g. WiFi) and WPAN (e.g. Bluetooth)
Recommended	Schiller, Jochen (2003). Mobile Communications (2nd edition). Addison Wesley
literature	Stallings, William and Beard, Cory (2016). Wireless Communications Networks and Systems
Teaching methods	 Interactive Lectures Interactive Exercise Sessions In addition for Master students: They need to read a scientific paper of their choice that suits the course content, present the paper in a workshop and lead a discussion around it
Assessment method	Course portfolio
Language of instruction	English
Prerequisites	Students should have basic understanding of computer networks.

Advanced Automation

Course title	Advanced Automation
ECTS	5
sws	4
Semester	Winter
Workload in hours	Total: 150 / In-class: 60 / Self-study: 90
Lecturer	Prof. Dr. Terezia Toth
Course objectives	In the subject Advanced Automation, students obtain an overview on how programmable logic controllers (PLCs) work, as well as basic hardware and software requirements. They learn the standardized (IEC61131-3) and manufacturer-specific (TIA Portal) programming options. They learn how to use visualization software for the user interface.
	The students acquire the basic competence to understand automated processes in the automotive industry, power plants, chemical industry, building technology and transportation. Thus, the students are able to shape the digital transformation of the industry.
	Professional Skills The students are familiar with the concepts and components of a modern automation system including the structure and functionality of industrial communication systems, also with regard to safety and security.
	They are able to analyse, classify and solve simple tasks in automation technology.

The students know the requirements of hardware and software for a Programmable Logic Controller (PLC). They know the structure and the way a PLC operates. They are able create PLC programs. By using visualization software, they can demonstrate the processes.

Methodological Skills

The application-oriented knowledge allows the students to compare advantages and disadvantages of the individual industrial bus systems, to examine in contrast the advantages and disadvantages of the individual programming languages to find optimal solutions.

Soft Skills

The students work on problems in a focused and independent way.

They can communicate their solutions both verbally and in writing in appropriate technical language.

They learn from mistakes, can assess and improve their own abilities.

They are able to work actively as a team.

- 1. Function of SPS
- 1.1. Hardware requirements
- 1.2. Current embodiments
- 1.3. Environmental conditions
- 1.4. Real-time requirements
- 2. Programming languages

Course contents

- 3. Presentation of automation technology with regard to industrial communication
- 3.1. ISO / OSI model in industrial communication
- 3.2. Automation pyramid
- 3.3. Vertical communication
- 3.4. Structure and functionality of common communication systems
