

## Table of Contents

|   |    |
|---|----|
| German A1/ Parts 3 and 4.....                               | 2  |
| English in Technical Contexts B2.....                       | 4  |
| Intercultural Training for Germany and Bavaria .....        | 8  |
| Basics of International Sales and Business Development..... | 10 |
| Bavarian Culture.....                                       | 11 |
| Business Storytelling .....                                 | 13 |
| Cross-Cultural Team Building .....                          | 15 |
| EcoLab-News – News from Ecology and Economy.....            | 18 |
| Simplified Microcontroller Programming .....                | 20 |
| Introduction to Soil Mechanics.....                         | 22 |
| Introduction to Geotechnical Engineering .....              | 24 |
| Lean Management.....  | 26 |
| Selected Chapters in Control Engineering .....              | 27 |
| Automotive Drive Systems .....                              | 29 |
| Advanced Circuits Lab .....                                 | 31 |
| Batteries and Supercaps .....                               | 33 |
| Renewable Energy Systems .....                              | 34 |
| Introduction to the Finite Element Method.....              | 36 |
| Engineering Mechanics 3: Dynamics .....                     | 38 |
| Design Methodology/CAD.....                                 | 40 |
| Introduction to Solidworks (CAD).....                       | 41 |
| Advanced Solidworks (CAD).....                              | 42 |
| Additive Manufacturing – more than 3D Printing .....        | 43 |
| Introduction to Quality Management .....                    | 44 |
| Innovation Management .....                                 | 46 |
| Numerical Methods.....                                      | 48 |
| Projects in Science and Engineering.....                    | 49 |
| Advanced Projects in Science and Engineering.....           | 51 |
| Projects in Industrial Engineering.....                     | 53 |
| Advanced Projects in Industrial Engineering.....            | 55 |
| International Business Development .....                    | 57 |
| IT Skills for Project Managers.....                         | 59 |

## German A1/ Parts 3 and 4

|                          |  |
|--------------------------|--|
| <b>Course title</b>      | German A1/ Parts 3 and 4   |
| <b>ECTS</b>              | 4  |
| <b>Course type</b>       | Course with exercises  |
| <b>SWS</b>               | 4  |
| <b>Semester</b>          | Winter and Summer  |
| <b>Workload in hours</b> | 60 hrs   |
| <b>Lecturer</b>          | Dr. Virginia Wallner   |
| <b>Course objectives</b> | <ul style="list-style-type: none"> <li>• Can understand and use familiar expressions and very basic phrases aimed at meeting concrete everyday needs</li> <li>• Can introduce themselves and others and ask other people questions about their person</li> <li>• Can communicate in a simple way if the other person speaks slowly and clearly and is willing to help</li> </ul> <p><a href="http://www.europaeischer-referenzrahmen.de">http://www.europaeischer-referenzrahmen.de</a></p>  |

## English in Technical Contexts B2

|                          |  |
|--------------------------|--|
| <b>Course title</b>      | English in Technical Contexts B2   |
| <b>ECTS</b>              | 2  |
| <b>Course type</b>       | Language training course   |
| <b>SWS</b>               | 2  |
| <b>Semester</b>          | Winter and summer  |
| <b>Course level</b>      | <p><b>B2</b></p> <ul style="list-style-type: none"> <li>• Can understand the main ideas of complex text on both concrete and abstract topics, including technical discussions in his/her field of specialization</li> <li>• Can interact with a degree of fluency and spontaneity that makes regular interaction with native speakers quite possible without strain for either party</li> <li>• Can produce clear, detailed text on a wide range of subjects and explain a viewpoint on a topical issue giving the advantages and disadvantages of various options</li> </ul> <p><a href="http://www.europaeischer-referenzrahmen.de/">http://www.europaeischer-referenzrahmen.de/</a></p> |
| <b>Lecturer</b>          | Neal O'Donoghue, MA  |
| <b>Course objectives</b> | <p>This course aims to deepen students' encounter with the English language in a technical context by giving practical training in specialized vocabulary, grammar and language usage. The four cardinal language skills – listening, speaking, reading, and writing – will play an integral role in this training.</p> <p>The course is designed to be relevant and interesting for engineering students and will be adapted to their learning needs and study areas.</p> <p>By the end of the course, participants should have a more comprehensive understanding of, and enhanced fluency in, the English language in an engineering context.</p>                                       |

|                                      |  |
|--------------------------------------|--|
| <p><b>Course contents</b></p>        | <p><i>Obligatory topics (60 %):</i></p> <ul style="list-style-type: none"> <li>• Numbers and mathematical operations</li> <li>• Shapes and dimensions</li> <li>• August 2017</li> <li>• Basic physics and the scientific worldview</li> <li>• Materials and their properties</li> <li>• Case study on an area related to technology</li> <li>• /physics/engineering</li> <li>• Grammar/ communication skills</li> </ul> <p><i>Variable content (40 %):</i><br/>                 Variable content will be determined on the basis of a student survey conducted in the first session. Current world events (including news events and popular culture) and recent technological innovations may be used as a basis for discussions.</p> |
| <p><b>Teaching methods</b></p>       | <p>Teaching methods focus on improving the four cardinal language skills and include group discussions and group projects; individual work; mini-presentations; role-plays; close reading and listening activities; dictation; grammar games; and various follow-up viewing and writing activities.</p> <p>Work not completed in class should be done at home. Self-study assignments will be set on a weekly basis.</p>   |
| <p><b>Assessment method</b></p>      | <p>Written exam (60 min)</p> <p>No dictionaries are allowed.</p> <p>Exam structure:</p> <ul style="list-style-type: none"> <li>• Part 1: Listening comprehension(s)</li> <li>• Part 2: Reading comprehension(s)</li> <li>• Part 3: Vocabulary and technical content</li> <li>• Part 4: Grammar (maximum 10% of total exam points, excluding writing exercise)</li> <li>• Part 5: Writing composition (150-200 words)</li> </ul> <p>The exam will be based on topics covered during the semester.</p>   |

## Intercultural Training for Germany and Bavaria

|                               |   |
|-------------------------------|---|
| <b>Course title</b>           | Intercultural Training for Germany and Bavaria  |
| <b>ECTS</b>                   | 1   |
| <b>Course type</b>            | Elective  |
| <b>SWS</b>                    | 1   |
| <b>Semester</b>               | Winter and summer   |
| <b>Workload in hours</b>      | 30 hours  |
| <b>Name of Instructor</b>     | Lisa Werner   |
| <b>Course objectives</b>      | Participants get an understanding of the different theories of "culture" and learn about stereotypes and traditions in Bavaria. Furthermore, the participants get information on Germany and Bavaria as well as the Deggendorf Institute of Technology. |
| <b>Course contents</b>        | <ul style="list-style-type: none"> <li>I. Culture (theroies)</li> <li>II. Customs and Rituals in Germany/Bavaria</li> <li>III. Information on Germany and Bavaria and the DIT</li> <li>IV. Quiz and Presentation</li> <li>V. Culture Shock</li> </ul>   |
| <b>Recommended literature</b> | <p>Bolten J. und Ehrhardt C., Interkulturelle Kommunikation, Verlag Wissenschaft &amp; Praxis 2003;<br/>         Bolten J, Einführung in die interkulturelle Wirtschaftskommunikation, Vandenhoeck &amp; Ruprecht 2007</p>                              |
| <b>Teaching methods</b>       | <p>The course is organized according to four pillars:</p> <ul style="list-style-type: none"> <li>1. Culture</li> <li>2. Customs and Rituals</li> <li>3. Information on Germany/Bavaria</li> <li>4. Culture Shock</li> </ul>                             |

---

Whereas hard facts are taught in a classical lecture style, students will do lots of role-plays, critical incidents, short movies and do a quiz.

---

**Assessment method** Paper

---

**Language of instruction** English/German

---

**Prerequisites** None

### Course objectives

Globalisation demands that managers possess the basic skills required to work together in international teams. Many companies actively encourage the development of these skills through teambuilding or team development programs. Especially for change management, team development plays an increasingly important role. Here the critical goal is to optimise how the group members work together as a team. Key factors affecting a team's success include organisation, structures, processes, culture and relationships.

International Team Building is conducted at the beginning of the semester as a three day off-campus seminar. The hands-on, outdoor training gives the students intensive exposure to the multifaceted nature of group dynamics.

By working together to solve complex problems and through structured feedback sessions, the participants become sensitised to the rolls they assume in group interactions, to the limitations imposed by the German and their own cultures, and to the conditions required for effective team work.

The course supports the integration of foreign students into campus and social life and helps build lasting working relationships among all participants.

The skills of giving and receiving of feedback are learned in the protective atmosphere of small groups through intensive exchanges between instructors and participants. This leads to improved observation and communication skills.

Moreover, the group members continually switch roles. This promotes a deeper understanding of social interaction, helps members to reflect on their contribution to the group process, encourages members to experiment with new behavioural concepts, and improves the group's capacity to co-operate and perform. Final feedback rounds offer the possibility to align the members' self-images with the perception others have of them, to reduce "blind spots", to increase self-confidence and their ability to reflect.

The capacity to give appropriate feedback in various situations, to monitor one's self image as well as the consequences of one's own behaviour form the basis for a successful career in management.

**Course contents**

Group dynamics, processes and structures in groups; Roles in groups (roles in tasks and supporting roles); Group leadership; Effect of one's actions in groups; The "give and take" of feedback; Self-image and how others see you; Communication levels (content versus relationship); Conditions for successful co-operation; Cultural influences on teamwork.

Note: The main emphasis of this course is not the conveyance of theoretical knowledge, but rather learning directly from experience. The theories on which the intervention and evaluation sessions are based are taught in the course "Human Resources Management".

**Teaching methods**

This course is organised as an interactive experience and activity based training program. With the help of complex tasks, timed interaction activities combined with elements of surprise, classical outdoor training exercises, moderated feedback and reflection sessions, participants are taught the necessary conditions for effective teamwork.

The teaching methods are based on the principles of self-organised learning. The instructors define their roles in terms of Schein's model of process consulting.

---

They intervene by questioning the participants in a manner designed not only to examine their perspectives, but to introduce new perspectives and stimulate the group's creative process.

The responsibility for these process remains with the participants.

In the context of the learning environment, the students enjoy the opportunity to increase their observation, communication, co-operation, self-reflection, teamwork and management skills as well as their self-confidence.

In addition, the course offers the students the chance to network and develop sustainable work relationships at the start of their studies.

**Miscellaneous**

The weekend seminar is characterised by team teaching in a mountain hostel. The team consists of Prof. Dr. Nagengast and trained tutors selected from participants in the course „Train the Trainer“. The tutors make it possible to conduct the training in small „protected“ groups (around 8) and to give qualified feedback.

## EcoLab-News – News from Ecology and Economy

|                          |  |
|--------------------------|--|
| <b>Course title</b>      | EcoLab-News – News from Ecology and Economy  |
| <b>ECTS</b>              | 2  |
| <b>Course type</b>       | Elective   |
| <b>SWS</b>               | 2  |
| <b>Semester</b>          | Summer   |
| <b>Workload in hours</b> | Total: 60 / In-class: 30 / Self-study: 30  |
| <b>Lecturer</b>          | Prof. Dr. Robert Feicht  |
| <b>Course objectives</b> | <p>Do you want to understand current climate policy issues and participate in sustainable development? The Fridays for Future movement has proven that properly set information will be heard. Together we will develop a kind of "information service" for the European Campus, which informs about the latest news, trends and movements in the field of sustainability and international politics.</p> <p>Methods expertise: In group work, various topics should be developed in a way that makes them easily understandable and communicable. Professional skills: Current knowledge in the field of sustainability and/or international politics. Social competence: Students work in groups. They learn the dynamics of team work and competences like systemic thinking, forward-thinking and acting, critical thinking, competence for fair and environmentally friendly action as well as competence in planning and implementing innovative projects.</p> |
| <b>Course contents</b>   | <p>Development and implementation of an "information service" (newsletter, posts) in the field of sustainability and/or international politics.</p> <p>Preparation of current political topics, but also trends and developments in the field of sustainability for different target groups and different media.</p>   |
| <b>Teaching methods</b>  | Group discussion and group work. Summary and presentation of the results.  |

---

**Assessment method** seminar paper and presentation

---

**Language of instruction** English

---

**Prerequisites** None. Good writing skills and interest in current sustainable and/or political topics would be beneficial.

---

## Simplified Microcontroller Programming

|                          |   |
|--------------------------|---|
| <b>Course title</b>      | Simplified Microcontroller Programming  |
| <b>ECTS</b>              | 2   |
| <b>Course type</b>       | Lecture with practical exercises  |
| <b>SWS</b>               | 2   |
| <b>Semester</b>          | Winter and summer   |
| <b>Workload in hours</b> | Total: 60 / In-class: 30 / Self-study: 30   |
| <b>Lecturer</b>          | Johann Gerner   |
| <b>Course objectives</b> | <p>In almost all areas of technical installations, microcontrollers constitute the core of control and regulating engineering. By means of various university initiatives, systems have been developed that are both inexpensive and easy to program and therefore they are especially suitable for students who do not have an extensive basic knowledge in the field of electrical engineering. Based on the simple development system "Arduino", students will learn how can be solved technical problems in the various engineering disciplines with the aid of software and hardware. Here, the handling of hardware-based programming is exercised and solution approaches are developed that are presented in the various sensors and actuators.</p> |
| <b>Course contents</b>   | <ul style="list-style-type: none"><li>• Introduction: presentation of the development system Arduino and its sub-systems</li><li>• Testing and analysis of existing sample programs under consideration of special problem cases</li><li>• Reading and implementing Fritzing diagrams and wiring diagrams</li><li>• Inclusion and application of external program libraries</li><li>• Application programming of different sensors and their characteristics</li><li>• Control of different actuators and introduction to the applied technology</li></ul>  |

---

|                                |   |
|--------------------------------|---|
|                                | <ul style="list-style-type: none"><li>• Program development for simple measurement and control applications</li><li>• Information about current development trends in microcontroller engineering</li></ul> |
| <b>Recommended literature</b>  | Massimo Banzi, Arduino für Einsteiger (2012); O'Reilly<br>Simon Monk, Programming Arduino Next Steps: Going Further with Sketches   |
| <b>Teaching methods</b>        | Seminar-like lessons and practical tasks in the laboratory  |
| <b>Assessment method</b>       | Presentation of project results   |
| <b>Language of instruction</b> | English   |
| <b>Prerequisites</b>           | Fundamentals of Informatics, experience with Windows  |

---

## Introduction to Soil Mechanics

---

|                          |   |
|--------------------------|---|
| <b>Course title</b>      | Introduction to Soil Mechanics  |
| <b>ECTS</b>              | 3   |
| <b>Course type</b>       | Lecture and exercises<br>Presentations<br>Discussion  |
| <b>SWS</b>               | 2   |
| <b>Semester</b>          | Winter and summer   |
| <b>Lecturer</b>          | Prof. Dr.-Ing. Parviz Sadegh Azar   |
| <b>Course objectives</b> | <p>The objective of this course is to introduce the subject of soil mechanics and provide the basics of geotechnical engineering.</p> <p>Some of the important topics that students will learn during the course: soil structure and grain size; identification and classification of soils for engineering purposes; physical and engineering properties of soils; fundamental behaviour of soils subjected to various forces; groundwater and seepage through soils; compaction; consolidation; shear strength; and bearing capacity of soils.</p> <p>Students will get acquainted to several geotechnical problems and documentation of geotechnical observations. Upon successful completion of the course, students should be able to apply fundamentals of soil mechanics and principles of geotechnical engineering in the analysis, design, and construction of civil engineering projects.</p> |
| <b>Course contents</b>   | <p>The subject will give an introduction to:</p> <ul style="list-style-type: none"><li>• Classification of soil materials</li><li>• Stresses and strain in soil</li><li>• Shear strength of soil</li><li>• Lateral earth pressure</li><li>• Primary settlement of soil and calculations</li><li>• Slope stability</li><li>• Bearing capacity of foundations</li><li>• Uplift and hydraulic failure</li></ul>  |

## Introduction to Geotechnical Engineering

---

|                          |   |
|--------------------------|---|
| <b>Course title</b>      | Introduction to Geotechnical engineering  |
| <b>ECTS</b>              | 3   |
| <b>Course type</b>       | Lecture and exercises<br>Presentations<br>Discussion  |
| <b>SWS</b>               | 2   |
| <b>Semester</b>          | Winter  |
| <b>Lecturer</b>          | Prof. Dr.-Ing. P. Sadegh Azar   |
| <b>Course objectives</b> | <p>This unit of study aims to introduce you to the fundamentals and basic techniques used in Foundation Engineering. Specifically, it will provide you with the design and construction principles used in Foundation Engineering type structures such as earth retaining structures, sheet piles and shallow footings according to European standards (EC 7).</p> <p>Some of the important topics that students will learn during the course:</p> <ol style="list-style-type: none"><li>1. Analyse earth retaining structures to determine active, passive and at rest lateral earth pressures (and associated forces).</li><li>2. Design the dimensions of retaining gravity and cantilever walls and assess the stability of these designed walls.</li><li>3. Determine the appropriate section of sheet piles and the depth of embedment, maximum moment, and the tension in tie rod in case of using anchored sheet piles.</li><li>4. Analyse bearing capacity of soils under shallow footings.</li><li>5. Design shallow footings based on dimensions, thickness, area and length.</li><li>6. The basics for determining the bearing capacities of single piles.</li></ol> <p>Students will get acquainted to several geotechnical problems and documentation of geotechnical problems. Upon successful completion of the course, students should be able to apply fundamentals of foundation engineering</p> |

## Renewable Energy Systems

---

|                          |   |
|--------------------------|---|
| <b>Course title</b>      | Renewable Energy Systems  |
| <b>ECTS</b>              | 5   |
| <b>Course type</b>       | Lecture   |
| <b>SWS</b>               | 4   |
| <b>Semester</b>          | Winter  |
| <b>Workload in hours</b> | Total: 150 / In-class: 60 / Self-study: 90  |
| <b>Lecturer</b>          | Prof. Dr.-Ing. Otto Kreutzer  |
| <b>Course objectives</b> | <ul style="list-style-type: none"><li>- Forms of renewable energies</li><li>- Transport and storage of renewable energies</li><li>- Potential and limits of a 100 % renewable energy supply</li><li>- Possibilities to actively stop and reverse the effect of global warming</li></ul>   |
| <b>Course contents</b>   | <p>The goal of the course is to find ways to supply all worldwide energy demands with renewable energies and realize a carbon-neutral society. To achieve this goal, the different forms of renewable energies are evaluated and necessary technologies to store and transport those renewable energies are explored. After knowing possible forms of energy supply, the energy demand in the different sectors is evaluated and technical solutions to supply industry, transport (cars, aircrafts, planes, ships) and households with 100 % renewable energies are depicted. In addition solutions are revealed to reduce the atmospheric temperature to pre-industrial levels.</p> |
| <b>Teaching methods</b>  | Lecture / presentation  |
| <b>Assessment method</b> | Written examination, 90 min.  |

---

---

|                                |  |
|--------------------------------|--|
| <b>Language of instruction</b> | English  |
| <b>Prerequisites</b>           | Interest in renewable energies, background in electrical engineering |

---

## Introduction to the Finite Element Method

|                               |  |
|-------------------------------|--|
| <b>Course title</b>           | Introduction to the Finite Element Method with NASTRAN & PATRAN  |
| <b>ECTS</b>                   | 4  |
| <b>Course type</b>            | Lectures with workshops  |
| <b>SWS</b>                    | 4  |
| <b>Semester</b>               | Winter and summer  |
| <b>Workload in hours</b>      | Total: 120 / in-class: 40 / Self-study: 80   |
| <b>Lecturer</b>               | Prof. Dr. Christian Bongmba  |
| <b>Course objectives</b>      | The main aim is to introduce students to the direct stiffness method. They learn how to derive the stiffness matrices for springs, bars, beams, two- and three-dimensional finite elements. The workshops introduce students to MSC NASTRAN and PATRAN. Students learn how to use PATRAN for pre- and post-processing and NASTRAN as a solver. They learn how to import geometry into PATRAN, carry out the discretization, define material and section properties and boundary conditions and set up a finite element analysis. |
| <b>Course contents</b>        | <ol style="list-style-type: none"> <li>1. Introduction – What is the Finite Element Method?</li> <li>2. Discretization examples</li> <li>3. Development of truss element</li> <li>4. Development of beam element</li> <li>5. Two-dimensional elements</li> <li>6. Three-dimensional elements</li> <li>7. Workshops with MSC NASTRAN und PATRAN linear static, normal modes and buckling</li> </ol>   |
| <b>Recommended literature</b> | Logan, Daryl L.: A First Course in the finite Element Method, CENGAGE Learning 2012.   |

## Engineering Mechanics 3: Dynamics

|                          |   |
|--------------------------|---|
| <b>Course title</b>      | Engineering Mechanics 3: Dynamics   |
| <b>ECTS</b>              | 5   |
| <b>Course type</b>       | Lectures with tutorials   |
| <b>SWS</b>               | 4   |
| <b>Semester</b>          | Summer  |
| <b>Workload in hours</b> | Total: 150 / In-class: 45 / Self-study: 105   |
| <b>Lecturer</b>          | Prof. Dr. Christian Bongmba   |
| <b>Course objectives</b> | <p>The main aims of the course are:</p> <p>For the students to understand the effect of forces and moments on the motion of mechanical systems.</p> <p>For them to be able to mathematically describe the motion of a particle and a rigid body in an inertial as well as in a moving frame.</p> <p>For the students to have a good understanding of the laws and principles of dynamics (Newton's second law, Newton-Euler equations, d'Alembert's principle, work-energy theorem) and to be able to formulate these laws mathematically.</p> <p>For them to be able to derive the equations of motion of a particle or a rigid body using the laws and principles of dynamics.</p> <p>For the students to understand how to create mechanical models of technical systems and to use dynamics in solving problems related to these technical systems.</p> |
| <b>Course contents</b>   | <ul style="list-style-type: none"> <li>• Kinematics of a Particle</li> <li>• Laws of Dynamics</li> <li>• Dynamics of a Particle</li> <li>• Relative Motion</li> <li>• General Motion of a Rigid Body</li> </ul>   |

- 
- Rigid Bodies in Plane Motion
  - Elementary Impact Dynamics
  - Mechanical Vibrations
-

## Design Methodology/CAD

|                               |   |
|-------------------------------|---|
| <b>Course Title</b>           | Design Methodology/CAD  |
| <b>ECTS</b>                   | 3   |
| <b>Course type</b>            | Lecture with the conduction of CAD project  |
| <b>SWS</b>                    | 2   |
| <b>Semester</b>               | Winter and summer   |
| <b>Workload in hours</b>      | Total: 90 / In-class: 30 / Self-study: 60   |
| <b>Lecturer</b>               | Prof. Dr.-Ing. Karl Hain  |
| <b>Course Objectives</b>      | Students are able to apply design methods and rules systematically for product development, especially in the earlier design stages, using CAD for the depiction of solutions.  |
| <b>Course Contents</b>        | <ul style="list-style-type: none"> <li>• Introduction to basics</li> <li>• Methodology of the design process</li> <li>• Conceptual design <ul style="list-style-type: none"> <li>○ Analysis and requirements</li> <li>○ Functional analysis, function structures and logical considerations</li> <li>○ Aids and methods for finding solutions</li> </ul> </li> <li>• Evaluation and selection</li> <li>• Rules and principles for embodiment design</li> <li>• TRIZ techniques</li> <li>• Design examples with CAD</li> </ul> |
| <b>Recommended Literature</b> | Pahl, Beitz et. al.: Engineering Design: A Systematic Approach, 3 <sup>rd</sup> Edition, Springer 2007, ISBN: 978-1-84628-318-5   |
| <b>Teaching Methods</b>       | Lecture with integrated product development example with CAD  |
| <b>Assessment Methods</b>     | Written examination, 90 min.  |
| <b>Prerequisites</b>          | Basics of design and CAD  |

## Introduction to Solidworks (CAD)

---

|                                |   |
|--------------------------------|---|
| <b>Course title</b>            | Introduction to Solidworks (CAD)  |
| <b>ECTS</b>                    | 3   |
| <b>Course type</b>             | Lecture with CAD exercises  |
| <b>SWS</b>                     | 2   |
| <b>Semester</b>                | Winter and summer   |
| <b>Workload in hours</b>       | Total: 90 / In-class: 30 / Self-study: 60   |
| <b>Lecturer</b>                | Prof. Dr.-Ing. Karl Hain  |
| <b>Course Objectives</b>       | Students are able to apply Solidworks CAD system for product development  |
| <b>Course Contents</b>         | <ul style="list-style-type: none"><li>• Overview and menus</li><li>• Sketch elements, tolerance, dimensioning</li><li>• Modeling single parts</li><li>• Modeling assemblies</li><li>• Modeling welded parts</li><li>• Simulations</li></ul> |
| <b>Teaching Methods</b>        | Supervised CAD exercises at PCs   |
| <b>Assessment Method</b>       | Written examination, 90 min.  |
| <b>Language of Instruction</b> | English   |
| <b>Prerequisites</b>           | Basics of design and product development  |

---

## Advanced Solidworks (CAD)

---

|                                |  |
|--------------------------------|--|
| <b>Course title</b>            | Advanced Solidworks (CAD)  |
| <b>ECTS</b>                    | 3  |
| <b>Course type</b>             | Practical exercises with CAD system Solidworks   |
| <b>SWS</b>                     | 2  |
| <b>Semester</b>                | Winter and summer  |
| <b>Workload in hours</b>       | Total: 90 / In-class: 30 / Self-study: 60  |
| <b>Lecturer</b>                | Prof. Dr.-Ing. Karl Hain   |
| <b>Course objectives</b>       | Students are able to apply Solidworks CAD system for more complex product development  |
| <b>Course contents</b>         | <ul style="list-style-type: none"><li>• Loft boss/base techniques</li><li>• Spline functions</li><li>• Surface modelling tools and techniques</li><li>• Sheet metal parts</li><li>• Advanced mechanical mates for assemblies</li></ul> |
| <b>Recommended literature</b>  | Solidworks online help   |
| <b>Teaching methods</b>        | CAD exercises / practical work   |
| <b>Assessment method</b>       | Written examination, 90 min.   |
| <b>Language of instruction</b> | English  |
| <b>Prerequisites</b>           | Basic knowledge of design and product development  |

## Additive Manufacturing – more than 3D Printing

|                                |   |
|--------------------------------|---|
| <b>Course title</b>            | Additive Manufacturing – more than 3D Printing  |
| <b>ECTS</b>                    | 2   |
| <b>Course type</b>             | Lecture   |
| <b>SWS</b>                     | 2   |
| <b>Semester</b>                | Summer  |
| <b>Workload in hours</b>       | Total: 60 / In-class: 30 / Self-study: 30   |
| <b>Lecturer</b>                | Prof. Dr. Christian Wilisch   |
| <b>Course objectives</b>       | The students learn about the basic concepts and about the most common methods of additive manufacturing                               |
| <b>Course contents</b>         | Basic principles of additive manufacturing (AM); AM from the solid, liquid and gaseous phase  |
| <b>Recommended literature</b>  | Andreas Gebhardt, A. and Hötter, J.-S.; Additive Manufacturing; Hanser, 2016<br>(this book is useful, but not required for the class) |
| <b>Teaching methods</b>        | Lectures  |
| <b>Assessment method</b>       | Written paper and presentation in class   |
| <b>Language of instruction</b> | English   |
| <b>Prerequisites</b>           | None  |

## Introduction to Quality Management

---

|                               |   |
|-------------------------------|---|
| <b>Course title</b>           | Introduction to Quality Management  |
| <b>ECTS</b>                   | 4   |
| <b>Course type</b>            | Lecture   |
| <b>SWS</b>                    | 3   |
| <b>Semester</b>               | Winter and summer   |
| <b>Workload in hours</b>      | Total: 60 / In-class: 30 / Self-study: 30   |
| <b>Lecturer</b>               | Prof. Dr. Christian Wilisch   |
| <b>Course objectives</b>      | <p>Quality management (QM) is an indispensable tool not only in production environments but in all aspects of commerce.<br/>This course aims to provide students with basic knowledge about QM techniques and their applications.</p>   |
| <b>Course contents</b>        | <ul style="list-style-type: none"><li>• What is 'quality'?</li><li>• Historical context of quality management</li><li>• Financial aspects of quality management</li><li>• Quality techniques and their applications</li><li>• Process control techniques</li></ul>  |
| <b>Recommended literature</b> | <ul style="list-style-type: none"><li>• Imai, Masaaki: Gemba Kaizen, 2nd ed., McGraw-Hill, New York, 2012</li><li>• Chalkiadakis, Ioannis: New Product Development with the Use of Quality Function Deployment, Lambert, Mauritius, 2019</li><li>• Montgomery, Douglas C.: Introduction to Statistical Quality Control, Wiley, New York, 2019</li></ul> |
| <b>Teaching methods</b>       | Lectures with discussions and presentations   |
| <b>Assessment method</b>      | Written paper to be presented in class  |

## Innovation Management

|                                |  |
|--------------------------------|--|
| <b>Course title</b>            | Innovation Management  |
| <b>ECTS</b>                    | 4  |
| <b>Course type</b>             | Lecture  |
| <b>SWS</b>                     | 4  |
| <b>Semester</b>                | Summer   |
| <b>Workload in hours</b>       | Total: 150 / In-class: 60 / Self-study: 90   |
| <b>Lecturer</b>                | Prof. Dr. Christine Wünsche  |
| <b>Course objectives</b>       | Know about methods of systematic invention and creative thinking   |
| <b>Course contents</b>         | Definition of "invention", Design thinking and TRIZ, Methods to improve creative thinking, creating empathy, basic practice.   |
| <b>Recommended literature</b>  | Introductions to design Thinking, TRIZ, Creative Thinkin by Edition Gabal and Pocket power by Hanser<br>Peter Orloff: Inventive thinking through TRIZ, a practical guide<br><a href="https://triz-journal.com/">https://triz-journal.com/</a><br>Falk Uebernickel: design thinking: the handbook |
| <b>Teaching methods</b>        | Lecture / case studies   |
| <b>Assessment method</b>       | Written examination, 90 min.   |
| <b>Language of instruction</b> | English  |

---

**Prerequisites**            none

---

## Numerical Methods

|                                |   |
|--------------------------------|---|
| <b>Course title</b>            | Numerical Methods   |
| <b>ECTS</b>                    | 5   |
| <b>Course type</b>             | Lecture   |
| <b>SWS</b>                     | 4   |
| <b>Semester</b>                | Winter  |
| <b>Workload in hours</b>       | Total: 150 / In-class: 60 / Self-study: 90  |
| <b>Lecturer</b>                | Prof. Dr. Christine Wünsche   |
| <b>Course objectives</b>       | The students learn how to solve some standard task in engineering (mathematical) problem solving with the help numerical methods. They are aware which methods are available to solve problems, they understand when those methods might be useful, they can solve those questions in using software and they are able to apply that knowledge to solve examples. |
| <b>Course contents</b>         | Systems of Linear Equations, Interpolation and extrapolation, (Systems of)non-linear equations, Differential equations and systems of differential equations  |
| <b>Recommended literature</b>  | HR Schwarz: Numerical analysis;   |
| <b>Teaching methods</b>        | Lecture with exercises  |
| <b>Assessment method</b>       | Written examination, 90   |
| <b>Language of instruction</b> | English   |
| <b>Prerequisites</b>           | Engineering Mathematics, Integration, Differential equations  |

## Projects in Science and Engineering

---

|                               |  |
|-------------------------------|--|
| <b>Course title</b>           | Projects in Science and Engineering  |
| <b>ECTS</b>                   | 6  |
| <b>Course type</b>            | Project  |
| <b>SWS</b>                    | 4  |
| <b>Semester</b>               | Winter and summer  |
| <b>Workload in hours</b>      | 180  |
| <b>Lecturer</b>               | Prof. Dr. Thomas Stirner   |
| <b>Course objectives</b>      | Knowledge of project management; analysis, distribution and solution of the tasks in a small team; obtaining and presenting results; practical application of the theoretical knowledge base; communication and team skills; strategic planning; time-management skills; problem-solving skills  |
| <b>Course content</b>         | Projects or part of a project may be of a theoretical nature (e.g. literature review, software development, data mining, etc.) or of an experimental nature (e.g. design of experiment, measurements, etc); project descriptions will be made available at the beginning of the semester; teams will be built to solve the tasks; each team will work on project results, which will be presented in written form and orally |
| <b>Recommended literature</b> | Specific to the project  |
| <b>Teaching methods</b>       | Supervision  |
| <b>Assessment method</b>      | Written report and oral presentation   |

## International Business Development

|                          |  |
|--------------------------|--|
| <b>Course title</b>      | International Business Development   |
| <b>Course ID</b>         | A3111  |
| <b>ECTS</b>              | 5  |
| <b>SWS</b>               | 4  |
| <b>Semester</b>          | Winter   |
| <b>Workload in hours</b> | Total: 150 / In-class: 60 hrs / Self-study: 90 hrs   |
| <b>Lecturer</b>          | Mr. Jack Romero  |
| <b>Course objectives</b> | <p>The course is for students interested in starting their own businesses or focusing on international business development. The aim is to prepare students with skills involved in launching and leading businesses but also to use those skills to develop and run businesses or business units with a direction toward innovation, international expansion and growth. Students gain theoretical insights with practical applications in a learning environment characterized by active participation, both individually and in groups.</p>   |
| <b>Course contents</b>   | <p>Perspectives on Strategy:</p> <ul style="list-style-type: none"> <li>• Strategic thinking from both an internal and external perspective.</li> <li>• Foundations of strategy and strategic perspectives</li> <li>• Strategies for innovation, product, process, organization, marketing</li> </ul> <p>Entrepreneurship and Business Growth</p> <ul style="list-style-type: none"> <li>• Maintaining entrepreneurial drive</li> <li>• Government partnering</li> <li>• Turnaround strategies</li> </ul> <p>Managing Networks and Internationalisation</p> <ul style="list-style-type: none"> <li>• How to develop business capabilities through internationalization and networking</li> <li>• Building, maintaining and supporting businesses with various modes of foreign operations</li> </ul> |
